

A stored Cross-Site Scripting (XSS) vulnerability exists in the section where new items are added. This stored XSS vulnerability can cause pop-ups and the theft of administrator cookies, significantly affecting the website's normal functionality.

## impacted versions

Hello, I found Stored XSS in EyouCMS version V1.6.7-UTF8-SP1\_0802

<https://www.eyoucms.com/>

## Here are the complete attack steps

1. Please log in to the backend and follow the steps illustrated in the image to add a new section.

2. Enter a malicious payload in the section name field, fill in the other options as you wish, and submit when finished.

```
"<img src=1 onerror=alert(document.cookie)>
```

3. After submission is successful and the page redirects, a popup appears, indicating that the admin's cookie information has been successfully obtained.

[illegible]

## recommendations for remediation

1. To mitigate security risks, apply input filtering to ensure that any JavaScript tags are disabled or sanitized before they are processed by the system.
